Overview

FaceTracer is the first **face search engine**

- Built using over **3 million** face images
- “**Real-world**” images collected from the internet
- Simple **attribute-based** text queries
- **Automatic selection** of best features for each attribute

Training Process

1. Train local SVMs for each region/feature type combination
2. Use Adaboost to select best features
3. Train global SVM on union of selected features
